

Obtaining QL2 LiDAR Data Through Federal Agency Collaboration

Clinton County saw a unique opportunity in the latter half of 2017 to collaborate with the USGS and conduct a joint purchase of Quality Level 2 LiDAR data, in coordination with the State of Ohio Statewide Imagery and Elevation Program (OSIP) covering Clinton County, Ohio, in its entirety.

This presentation will include the steps taken during the process of contract acquisition and Federal Government Agency collaboration, issues resolved during that process, a description of the data we will receive, and how that data will be used by multiple agencies and departments locally, through the State of Ohio, and Nationally, to continue moving forward with a state of the art, 21st century GIS Program.
